### **DETAILED ACTION**

1. This Office Action is the answer to an amendment filed on 1/22/2008. Claims 1-2, 12, 14-17, and 19-22 were pending; new claims 24-25 are added.

#### ***Drawings***

2. New formal drawings submitted on 1/22/2008 are accepted.

#### ***Examiner's amendment:***

3. An examiner's amendment to the record appears below. Since applicants elected method claims for examination on the merit to response an Office Action mailed on 10/16/2007, newly added claim 25 which is directed to an apparatus comprising physical components would be canceled for this allowability. Should the changes and/or additions be unacceptable to applicants, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

- Claim 25 is now canceled.

#### ***Allowable subject matter***

4. Independent claims 1, and 24 are patentable over a closest reference of Ito et al. (US Pat. 5,270,930) because this document does not make obvious the pending invention for a teaching of a method of determining a steering torque for the steering wheel of a motor vehicle, wherein a steering angle for the steered wheels is predefined by a driver of the vehicle by means of the steering wheel using a continuous mechanical connection between the steering wheel and the steered wheels, whereby an actual steering-wheel torque ( $M_{ist}$ ) which represents the actual forces on the vehicle axle is active, said steering-wheel torque being caused as a result of the continuous mechanical connection existing between the steering wheel and the steered wheels,

and wherein a plurality of axle models representing characteristics of an axle of the motor vehicle are provided, an actual driving situation is determined from measured values, one of the axle models is selected as a selected axle model that is more favorable for the actual driving situation than one or more other axle models, a desired manual torque ( $M_{soll}$ ) is determined the selected axle model, and a steering actuator is actuated responsive to any difference between the actual steering-wheel torque ( $M_{ist}$ ) and the desired manual torque ( $M_{soll}$ ) so as to adjust said actual steering-wheel torque ( $M_{ist}$ ) toward said desired manual torque ( $M_{soll}$ ).

In particular, Ito et al. does not disclose about selecting different axle models in that claimed environment to determining a steering torque for the vehicle.

5. Claims 2, 12, 14-17, and 19-22 are allowed because they are dependent on allowable claim 1.

### ***Conclusion***

6. Claims 1-2, 12, 14-17, and 19-22 are allowed, they are renumbered as claims 1-12.

An initialed IDS (1/31/2005) is attached herein.
